Detailed Test Case Summary

ID	Test Scenario	Priority	Status
REG_01	Successful Registration (Happy Path)	High	PASSED
REG_02	Missing Required Fields (Validation)	High	PASSED
REG_03	Password Mismatch Check	High	PASSED
REG_04	Duplicate Username Prevention	Med	PASSED
REG_05	Optional Field Check (Phone Omitted)	Low	PASSED
REG_06	Invalid SSN Format Audit	Med	PASSED
REG_07	Short Zip Code Validation	Med	FAILED
REG_08	Security: Script Injection Check	Med	FAILED

ID	Test Scenario	Priority	Status
REG_09	Extreme String Length Handling	Low	PASSED
REG_10	Navigation Flow: Return to Home	Low	FAILED

Security & Quality Audit Findings

→ **Critical Vulnerability:** The system is susceptible to Cross-Site Scripting (XSS) via registration fields. Basic script tags were accepted without sanitization.

→ **Data Integrity:** Validation for ZIP codes and SSNs is insufficient, allowing non-standard formats to persist in the database.

→ **UI/UX:** Redirect logic occasionally fails during high-latency navigation, as seen in the REG_10 failure.
